MENU RECOMMENDATION APP

A HIGHLY INTERACTIVE AND GAMIFIED FOOD RECOMMENDATION APPLICATION

2022310638 Hur Kim Yumi

Problem(Why)

Choosing what to eat is a small decision people make every day — yet it can be time-consuming and mentally exhausting.

Time-Consuming

Browsing menus and weighing options
options drains time

Mentally Exhausting

Repeated small decisions compound into
compound into real fatigue

No Insight

Users lack visibility into their own eating
habits

Solution(What)

A gamified meal recommendation application built with **Python and Streamlit** that helps users overcome decision fatigue when choosing what to eat.

By combining **interactive selection games**, personalized filtering, and eating habit analytics, the app transforms everyday meal decisions into a fast, engaging, and data-driven experience.

Demo

Final output

User flow in 6 Steps

Every confirmed meal feeds back into your personal recommendation feed and eating habit analysis — making the app smarter with each use. smarter with each use.

Data Utilization

Habit Analysis

Most Selected Categories

See which food types you reach for most often — and spot spot patterns you might not notice day-to-day.

Daily Calorie Tracking

Understand your calorie consumption over time with clear, at-a-clear, at-a-glance summaries.

Recent Meal Records

A running history of your confirmed meals keeps you accountable and informed.

Personalized Feed

Recommendations improve as the app learns your preferences preferences from every selection you make.

What I Learned

Technical Skills

Built a complete Streamlit web app from scratch, managed dynamic user states, and implemented multiple gamification systems.

Data Engineering

Worked with real food nutrition datasets, datasets, designed recommendation logic, logic, and analyzed user-generated menu menu data.

UX & Design

Learned how gamification drives engagement engagement and designed a decision-support support experience — not just another food food search app.
